HELLENIC STATISTICAL AUTHORITY

The current release coincides with Greece's taking over the Presidency of the Council of the European Union for the first semester of 2014. It includes a set of key statistical data for Greece compiled mainly by the Hellenic Statistical Authority.

The Hellenic Statistical Authority (ELSTAT) will be in charge of preparing and conducting the meetings of the Council Working Party on Statistics. In this respect, the Greek Presidency will strive to complete the pending legislative dossiers that have been already well advanced and to achieve progress on initiated proposals of statistical acts.

The Greek Presidency will continue the work under way for the provision of relevant and high-quality official European Statistics to underpin the development, implementation and monitoring of Union policies. It will pay particular attention to enhancing confidence in official statistics, based on community law on statistics, commitment of national governments and compliance with the principles of the European Statistics Code of Practice.

As part of the effort to achieve the fundamental goals of quality and confidence in European Statistics, wherever they are produced, the Greek Presidency will promote discussion and consideration of a more integrated and independent European Statistical System (ESS), leading to more harmonised, high-quality and reliable European Statistics, while at the same time improving the cost effectiveness and efficiency of the production of European Statistics.

Andreas V. Georgiou
President
of the
Hellenic Statistical Authority

(1) Age dependency ratio: The ratio of the number of economically non-active persons (aged 0 - 14 and 65+) compared with the number of economically active persons (aged 15 - 64).

Ageing ratio: The number of persons aged 60 years or over per hundred persons under the age of 15.

Total fertility rate: The average number of living children that a woman will give birth to over the course of her lifetime (provided that during her reproductive age, the fertility conditions prevail by age of the reference year). The total fertility rate is used in order to determine the level of replacement of the generations, which, in developed countries is considered to be 2.1.

Total mortality rate: The number of deaths per 1,000 people.

Infant mortality rate: The number of children dying at less than a year of age divided by the number of live births that year. The ratio is expressed by 1,000 live births.

(1) As of June 2010, securitised assets are no longer derecognised from the Balance Sheet of banks that have adopted the International Accounting Standards. The counterpart of these assets is recorded on the liabilities side as "deposit liabilities to non-euro area residents".

(2) In August 2011 domestic credit institutions registered a reduction in the value of their portfolio of Greek Government securities amounting to EUR 4 billion because of their participation in the securities exchange programme agreed by the EU Summit of 21st July 2011. In January 2012 credit institutions registered a further reduction in the value of this portfolio amounting to EUR 5.8 billion, in March 2012 a reduction of EUR 15.2 billion and in April 2012 a reduction of EUR 4.1 billion.

(3) Greek contribution to euro area M3.

(4) Credit to domestic non-MFI residents by domestic MFIs, including securitised loans and corporate securities that have been derecognised from the Balance Sheet.

(5) Loans to public corporations that have been reclassified (in accordance with a decision by ELSTAT in November of 2010) from the private to the public sector are included in credit to General Government as of December 2009.

(6) Growth rates derived from the differences in outstanding amounts corrected for loan write-offs, revaluations in security prices, exchange rate variations, reclassifications and any other changes which do not arise from transactions.

(1) Any kind of extraction of energy products from natural sources to a usable form is called primary production. Primary production takes place when the natural sources are exploited, for example in coal mines, crude oil fields, hydro power plants or fabrication of biofuels. Transformation of energy from one form to another, like electricity or heat generation in thermal power plants or coke production in coke ovens is not primary production.
